New treatment for heart attack

*252. SHRI MUKHTIAR SINGH MALIK:
SHRI SHANKER SINH VAGHELA :

Will the Minister of HEALTH AND FAMILY WELFARE be pleased to state:

(a) whether the method of intravenous injection of Streptokinase or Urokinase along with adjuvant therapy of these medicines has been found successful for dissolving the clot in the arteries of the heart immediately after heart attack has occurred;

(b) whether any steps have been taken to provide such medicines in the hospitals; and

(c) if not what are the reasons therefor?

THE MINISTER OF HEALTH AND FAMILY WELFARE (SHRIMATI MOHSINA KIDWAI): (a) to (c) According to the studies undertaken abroad, Intravenous injection of Streptokinase has been found moderately effective in dissolving vascular clots and promoting the reopening of occluded coronary arteries within 90 minutes of administration under expert supervision in selected cases of myocardial infarction. While further evidence of the efficacy of this treatment is being collected in the developed countries, development of newer thrombolytic agents is also taking place. Any universalisation of such therapies can take place only after such therapies are standardised and get accepted as such. This stage has not yet been reached in our country.
